SYAHRUL RAMADHON

AI Implementation Specialist · System Analyst · Workflow Automation

Magelang, Central Java, Indonesia • +62 856-4731-4783 • syahrulram49@gmail.com • github.com/sahrulramad

PROFESSIONAL SUMMARY

Informatics graduate (S.Kom, Cum Laude) specializing in **AI Implementation, Business Process Analysis, and Workflow Automation**. Experienced in bridging operational processes with cloud AI solutions — from architecting autonomous LLM agents with tool-calling on Cloudflare Workers AI to building automated invoice and document microservices. Strong communicator passionate about user coaching and change management, empowering non-technical division personnel to adopt modern digital tools and eliminate operational bottlenecks.

CORE COMPETENCIES & TECHNICAL SKILLS

System Analysis & AI: Business Process Mapping, Workflow Automation, Cloud AI & LLM Implementation, Tool-Calling Architecture, Document/Invoice Digitalization, User Coaching & Change Management

Cloud & Automation Tools: Cloudflare Workers AI (Llama 3.3 70B), Docker, Google Cloud Run, Express / Node.js, Playwright Automation, Supabase, PostgreSQL, REST APIs

Programming & Web: Python, JavaScript, TypeScript, SQL, Next.js, React, Flask, Bootstrap, Tailwind CSS

Analytics & Modeling: Decision Support Systems (AHP & SAW), RapidMiner (Certified Master), scikit-learn, Predictive Modeling, Exploratory Data Analysis (EDA)

KEY PROJECTS & IMPLEMENTATION EXPERIENCE

Autonomous Cloud AI Agent & Operational Event Automation (dermist-bot) **2026**

Cloudflare Workers AI (Llama 3.3 70B), Node.js, Cloudflare KV, Event-Driven Architecture · github.com/sahrulramad/dermist-bot

- Architected an autonomous AI Agent powered by Llama 3.3 70B via serverless Cloudflare Workers AI, featuring dynamic tool-calling and persistent key-value memory for contextual execution.
- Automated multi-step administrative workflows (event-driven trigger-action system, activity audit logging, and automated permission/role assignment), eliminating manual operational overhead.
- Designed a modular "skills" and persona architecture allowing non-technical division administrators to adjust system behaviors without touching source code.

Enterprise Document & Invoice Digitalization Service (pdf-api) **2026**

Node.js, Express, Playwright (Chromium), Handlebars, Docker, Google Cloud Run · Microservice Architecture

- Developed an automated document generation microservice converting raw operational and sales data into standardized, audit-ready invoices and PDF reports using template rendering.
- Containerized the solution using Docker and deployed on Cloud Run with scale-to-zero efficiency, reducing manual document generation time to sub-second API transactions.
- Implemented enterprise-grade security protocols, including SSRF protection and API token authorization, ensuring secure handling of sensitive operational records.

Multi-Criteria Decision Support System (DSS) — Undergraduate Thesis **2026**

System Analysis & Design, AHP (Analytic Hierarchy Process), SAW (Simple Additive Weighting), Python, Flask

- Served as Lead System Analyst, mapping operational decision criteria and architecting a structured AHP-SAW decision support pipeline combined with a 97%-accurate Random Forest classifier.
- Streamlined subjective manual evaluations into transparent, weighted recommendations across 19 programs, resolving a major operational bottleneck in counseling workflows.
- Delivered an intuitive, non-technical web dashboard interface accompanied by clear user onboarding documentation to facilitate seamless user adoption.

Operational Policy & Business Recommendation Modeling — DSC INFEST26 **2026**

Python, scikit-learn, Feature Importance · github.com/sahrulramad/dsc-infest26-umkm

- Analyzed multi-attribute business profiles under severe class imbalance (~25% positive rate), applying threshold tuning and feature importance to diagnose key failure bottlenecks.
- Translated technical model coefficients into 4 actionable operational strategies (digital adoption, business planning, capital access, financial recordkeeping) for decision-makers.

EDUCATION

Bachelor of Informatics (S.Kom) — Universitas Teknologi Yogyakarta **2022 – 2026**

Yogyakarta, Indonesia · Student ID 5220411289 · GPA 3.53 / 4.00 · Cum Laude · Graduated Aug 29, 2026

- Undergraduate thesis: dominant-intelligence classification (Random Forest) combined with an AHP-SAW decision-support system for university-major recommendation.

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Machine Learning Master Certification (Altair RapidMiner, 2026) · English Proficiency Test (Score: 460 / UTY, 2026)

International Benchmark: Active Competitor — CASMI 2026 Molecular ML (Kaggle, Public Score: 0.413 · PyTorch & LightGBM Ranking Pipeline)
